

COPHS Verification Report

Brian Erly - CDPHE

1/11/2022

Introduction

This document contains a report of how recently hospitals have reported to COPHS.

This report is generated automatically using a script written in R.

For issues, please contact Brian Erly, brian.erly@state.co.us.

This script requires access to the folder “K:/CEDRS/Hosp_Uploads/2 Be Processed”. The first block of code evaluates whether that folder is accessible. If it is not accessible, you may need to log into the VPN.

Loading data

Data is loaded from the most recent data file output by COPHS.

COPHS data is typically output once a day around mid-morning.

```
## COPHS data import complete.  
##  
## COPHS data current as of 2022-03-04.  
##  
## 65770 records imported from 86 facilities.
```

```
## REDCap data import complete.  
##  
## Last REDcap file uploaded 2022-03-07 08:50:00.  
##  
## 10353 records imported.
```

Evaluate upload recency

For each facility, we generate data about the last time they uploaded a file as well as the last time they reported a new admission.

```
## Timeliness data generated for 86 distinct facility names.
```

The below table summarize hospitals with timely or delayed reporting.

Adequate reporting will provide data on hospitalized patients within 7 days.

For hospitals with on average 3 or more admissions per week, reporting 5 days a week is required.

For hospitals with on average 2 or fewer admissions per week, reporting 2 days a week is adequate.
